

Xceedance Quality Engineering

Quality At Speed And Scale

**Full-Lifecycle
Insurance Testing Partner**

20 clients globally
Carriers, MGAs, Reinsurers & Brokers

375+
Testing Professionals

50%+
Insurance certified

What we offer

Core Domain-led Testing Services

Policy administration, billing and payments, and claim management lifecycle; reinsurance

Insurance Suite Platform Testing

Insurance suite implementation, migration, product rollout, rating, forms/template upgrades

Specialized Testing Services

AI-augmented automation & performance engineering; data migration assurance; BI/reporting

Strategic Test Advisory & Consulting

QA-to-QE transformation; Testing Center of Excellence (TCoE) optimizations; testing maturity assessment

InsurTech Platform Testing Experience

Duck Creek

Proven experience delivering complex and diverse quality engineering programs

DuckCreek suite implementation:

Proven record implementing the Duck Creek full suite across multiple LOBs, distribution channels and regions, leveraging pre-built test suites to reduce risk and accelerate competitive rollouts.

Lloyd's of London:

Successfully delivered end-to-end testing for Lloyd's of London platforms ecosystem backed by deep market expertise, rigorous compliance alignment, and proven execution excellence.

E2E Test Automation:

Implemented a fully integrated end-to-end automation ecosystem that spans UI, API, data, and backend layers, orchestrated through CI/CD for continuous quality validation; leveraging in house self healing UI framework and Low/No Code automation; ensuring seamless in-sprint automation validation and 90% regression automation coverage.

Test Consulting:

Designed and implemented a hybrid TCoE operating model (agile pods + TCoE) that speeds Agile adoption and scales automation-first, AI-driven testing, enabling faster, more predictable releases with transparent governance.

Data Migration, BI & Reporting:

Implemented end-to-end solutions to ensure data accuracy, consistency, and completeness across every layer—from source systems through ETL pipelines to reporting dashboards.

AI Augmented Testing Solution:

Developed AI enabled testing platform – Test Ginie, engineered to generate high-quality, domain-relevant test cases directly from requirement artifacts, intelligent test data generation, strengthen quality coverage, and streamline automation. Implemented high-impact AI use cases—powered by advanced tools such as GitHub Copilot, Claude, and other generative AI platforms.

What distinguishes Xceedance as a trusted quality engineering partner

Blending deep insurance domain knowledge, strong testing expertise, and modern Agile/DevOps practices:

AI/ML-powered testing lifecycle

Reusable test accelerators & repository

Intelligent automation-first approach

Fit-for-purpose delivery model, engineered for outcomes

Insurance-first engineering approach (beyond “testing-as-a-step”):

We embed QE across the lifecycle—shift-left (requirements) to shift-right (production validation)—so quality is engineered in, not inspected later.

Measurable outcomes with transparent governance:

SLA-driven governance ensures you get predictable delivery, faster releases, and risk visibility your business can trust.
